

PARTIAL SOLAR ECLIPSE

2009 JAN 26TH

Monday Morning

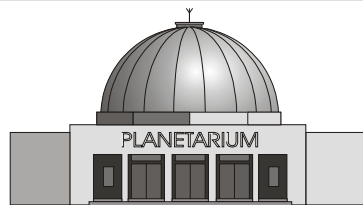

The January 26th eclipse is an annular eclipse: the Moon won't completely cover the Sun, even along the central path.

South Africa will see it as a partial eclipse. The shadow of the Moon passes over the Earth south of Africa, across the Indian Ocean to southern Asia.

You need eye-protection to watch the eclipse.

DO NOT EVER LOOK AT THE SUN WITH A CAMERA, TELESCOPE, OR BINOCULARS - YOU WILL BLIND YOURSELF!!
